

Aviation Meteorology

ISBN 3-9522668-2-5

Aviation Meteorology has been written by K.H. Hack, Meteorologist. He has been head of the Swiss Federal Office of Meteorology and Climatology (MeteoSwiss) for 15 years.

The book covers all aspects of aviation meteorology and is an excellent companion for CPL/ATPL students. The easy to read layout and the well designed graphics are a pleasure for the eye and make you to read on and on...

Color photos of weather phenomenon help you to visualize the content.

Because of its well structured layout, you will remember the book also at later stages in your career. So don't stow it away to far...! It also serves as an excellent resource in case you need to prepare for a technical interview.

Topics covered are: The Atmosphere, Wind, Thermodynamics, Clouds and Fog, Precipitation, Thunderstorms, Air masses and fronts, Pressure systems, Climatology, Weather hazards, General Information, Miscellaneous, Questions and Answers.

Because of the writers origin, some chapters focus on weather phenomenon occurring in central Europe. This can be seen as a goody and is of special interest to pilots flying in this part of the world. Meteorology has never been easier to learn and understand!

Aviation Meteorology conforms to the JAR directives and is available in english and in german language. Unfortunately the book is not widely available and can only be ordered at selected stores and online shops.

The book contains 263 pages.

Size: A4 (210x297mm), weight 1330g. €39.00 (excl. shipping)
